

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A golf club head comprising:
a golf club head a relatively thin shell comprising a plurality of walls that collectively form a hollow body with a substantially empty or voided cavity;
~~having a substantially hollow housing displacing an exterior displacement and having walls forming a cavity therebetween having an interior volume that, prior to placement of any material in the interior cavity, comprises the major portion of said exterior displacement; and~~
a port said club head having an opening defined therein formed through the housing to allow placement of material at one or more positions on an inside surface of at least one of said walls; and
a plurality of weights readily repositionably secured to said shell of said club head at readily accessible spaced-apart locations along the walls of the shell to adjust the center of gravity of the golf club head, at least one of said weights being securable in a location that is substantially non-co-linear with the others of said weights to permit adjustment of the center of gravity of the golf club head in at least two axes.
2. (Amended) The golf club head of Claim 1, further comprising a cover for closing the ~~port~~ opening.
3. (Amended) The golf club head of Claim 2, further comprising a vibration-dampening material interposed between the cover and the ~~port~~ opening formed through the housing.
4. (Amended) The golf club head of Claim 1, wherein the ~~port~~ opening is located on the sole of the housing.
5. (Amended) The golf club head of Claim 1, wherein the ~~weighting port~~ opening is located on ~~the~~ a crown of the housing.

6. (Amended) The golf club head of Claim 1, wherein the ~~port~~ opening is located on the shell of the housing.

7. (Original) The golf club head of Claim 1, wherein the housing forms at least a portion of a head of a golf wood.

8. (Original) The golf club head of Claim 1, wherein the housing forms at least a portion of a head of a golf iron.

9. (Original) The golf club head of Claim 1, wherein the housing forms at least a portion of a head of a golf putter.

10. (Currently Amended) A golf club head having an adjustable center of gravity, comprising:

a relatively thin shell comprising a plurality of walls that collectively form a hollow body with a substantially empty or voided cavity;

~~a substantially hollow body portion displacing an exterior displacement and having walls forming an interior cavity having an internal surface and an interior volume that, prior to placement of any material in the interior cavity, comprises the major portion of said exterior displacement;~~

~~a weighting port~~ an opening into said ~~providing access to the interior cavity; and~~

~~a removable weighting port cover~~ for selectively covering and uncovering the opening ~~weighting port; and~~

a plurality of weights readily repositionably secured to said shell of said club head at readily accessible spaced-apart locations along the walls of the shell to adjust the center of gravity of the golf club head, at least one of said weights being securable in a location that is substantially non-co-linear with the others of said weights to permit adjustment of the center of gravity of the golf club head in at least two axes.

11. (Amended) The golf club head of Claim 10, further comprising a vibration-dampener interposed between the weighting port cover and the body to reduce vibration of the ~~weighting port~~ cover.

12. (Amended) The golf club head of Claim 10, further comprising a vibration dampener secured to the ~~weighting port~~-closure of the opening.

13. (Amended) The golf club head of Claim 10, wherein the ~~weighting port~~ opening is located on the sole of the golf club head.

14. (Amended) The golf club head of Claim 10, wherein the ~~weighting port~~ opening is located on the crown of the golf club head.

15. (Amended) The golf club head of Claim 10, wherein the ~~weighting port~~ opening is located on the shell of the golf club head.

16. (Original) The golf club head of Claim 10, wherein the golf club head forms at least a portion of a golf wood.

17. (Original) The golf club head of Claim 10, wherein the golf club head forms at least a portion of a golf iron.

18. (Original) The golf club head of Claim 10, wherein the golf club head forms at least a portion of a golf putter.

19. (Currently Amended) A golf club head with an adjustable center of gravity, comprising:

a relatively thin shell comprising a plurality of walls that collectively form a hollow body with a substantially empty or voided cavity;

a port an opening allowing placement into the cavity of material at one or more positions along the internal wall of the cavity to adjust the center of gravity ; and

a plurality of weights readily repositionably secured to said shell of said club head at readily accessible spaced-apart locations along the walls of the shell to adjust the center of gravity of the golf club head, at least one of said weights being securable in a location that is substantially non-co-linear with the others of said weights to permit adjustment of the center of gravity of the golf club head in at least two axes.

a ~~port~~ closure for covering the opening into the cavity following placement of ~~material~~ said weights within the cavity.

20. (Currently Amended) The golf club head of Claim 19, wherein said ~~piece or pieces of material~~ weights comprise at least one strip of lead tape ~~placed on the internal wall of~~ adhesively secured to the inside surface of the shell inside the cavity at a position other than the center of gravity of the golf club head.

21. (Amended) The golf club head of Claim 19, wherein the ~~port~~ closure fits substantially flush with the external surface of the golf club head surrounding the ~~port~~ opening.

22. (Amended) The golf club head of Claim 19, further comprising a dampener for reducing vibration of the ~~port~~ closure when the closure covers the ~~port~~ opening.

23. (Amended) The golf club head of Claim 22, wherein the dampener comprises vibration dampening material compressed between at least a portion of the housing and the ~~port~~ closure.

24. (Amended) The golf club head of Claim 22, wherein the dampener is in contact with the ~~port~~ closure.

25. (New) The golf club head of Claim 1, wherein at least one weight is located at or near a low-back-center location.

26. (New) The golf club head of Claim 1, wherein at least one weight is located at a low-back-toe location.

27. (New) The golf club head of Claim 1, wherein at least one weight is located at a low-back-heel location.

28. (New) The golf club head of Claim 19, wherein at least one weight is secured to inside of the cover.
